Notes

The table refers to DIN 1301 Part 1 (2002) and Part 3 (1979).
 In accordance with the Execution Ordinance to the law on units in metrology (Federal German Units Ordinance) from 13th December 1985 only the following units are admissible for pressures:

- pascal (Pa)
- bar (bar)
- millimetre of mercury (mmHg), but only for blood pressure and the pressure of other physical liquids in medicine

Valid for these units in accordance with Federal German Unit Ordinance are the definitions and conversion factors per DIN 1301.

Listed in Part 1 of this standard

- pascal as derived SI unit with special name and with special unit symbol
 - bar as generally applicable unit outside the SI
 - millimetre of mercury as unit outside the SI with limited area of application
- Part 3 of this standard defines amongst other things conversion factors for the following units
- conventional millimetre of mercury (mmHg)
 - conventional metre of water (mWS)
 - torr (Torr)
 - technical atmosphere (at)
 - standard atmosphere (atm)

Notes

The table refers to ISO 31-1:1992 and ISO 31-3:1992
 For lengths ISO 31-1 defines conversion factors for units no longer to be used:

- inch (in)
- foot (ft)

For pressures ISO 31-3 defines conversion factors for units no longer to be used:

- pound-force per square inch (lbf/in.²)
- conventional millimetre of water (mmH₂O)
- conventional millimetre of mercury (mmHg)
- Torr (Torr)
- technical atmosphere (at)
